- Content writing club (E-Crush)..**

A photograph of Earth from space, showing a vast expanse of clouds and continents below. The horizon line is visible at the top, and the colors range from deep blues to bright whites and yellows.

**First movie we suggest to watch
this week is..**

INTERSTELLAR

First of all, how would you feel if you are thought about time deletion or Einstein theory of relativity or about warm holes and quantum physics... Yah we would get bored. But movies have the power to make these topics interesting.

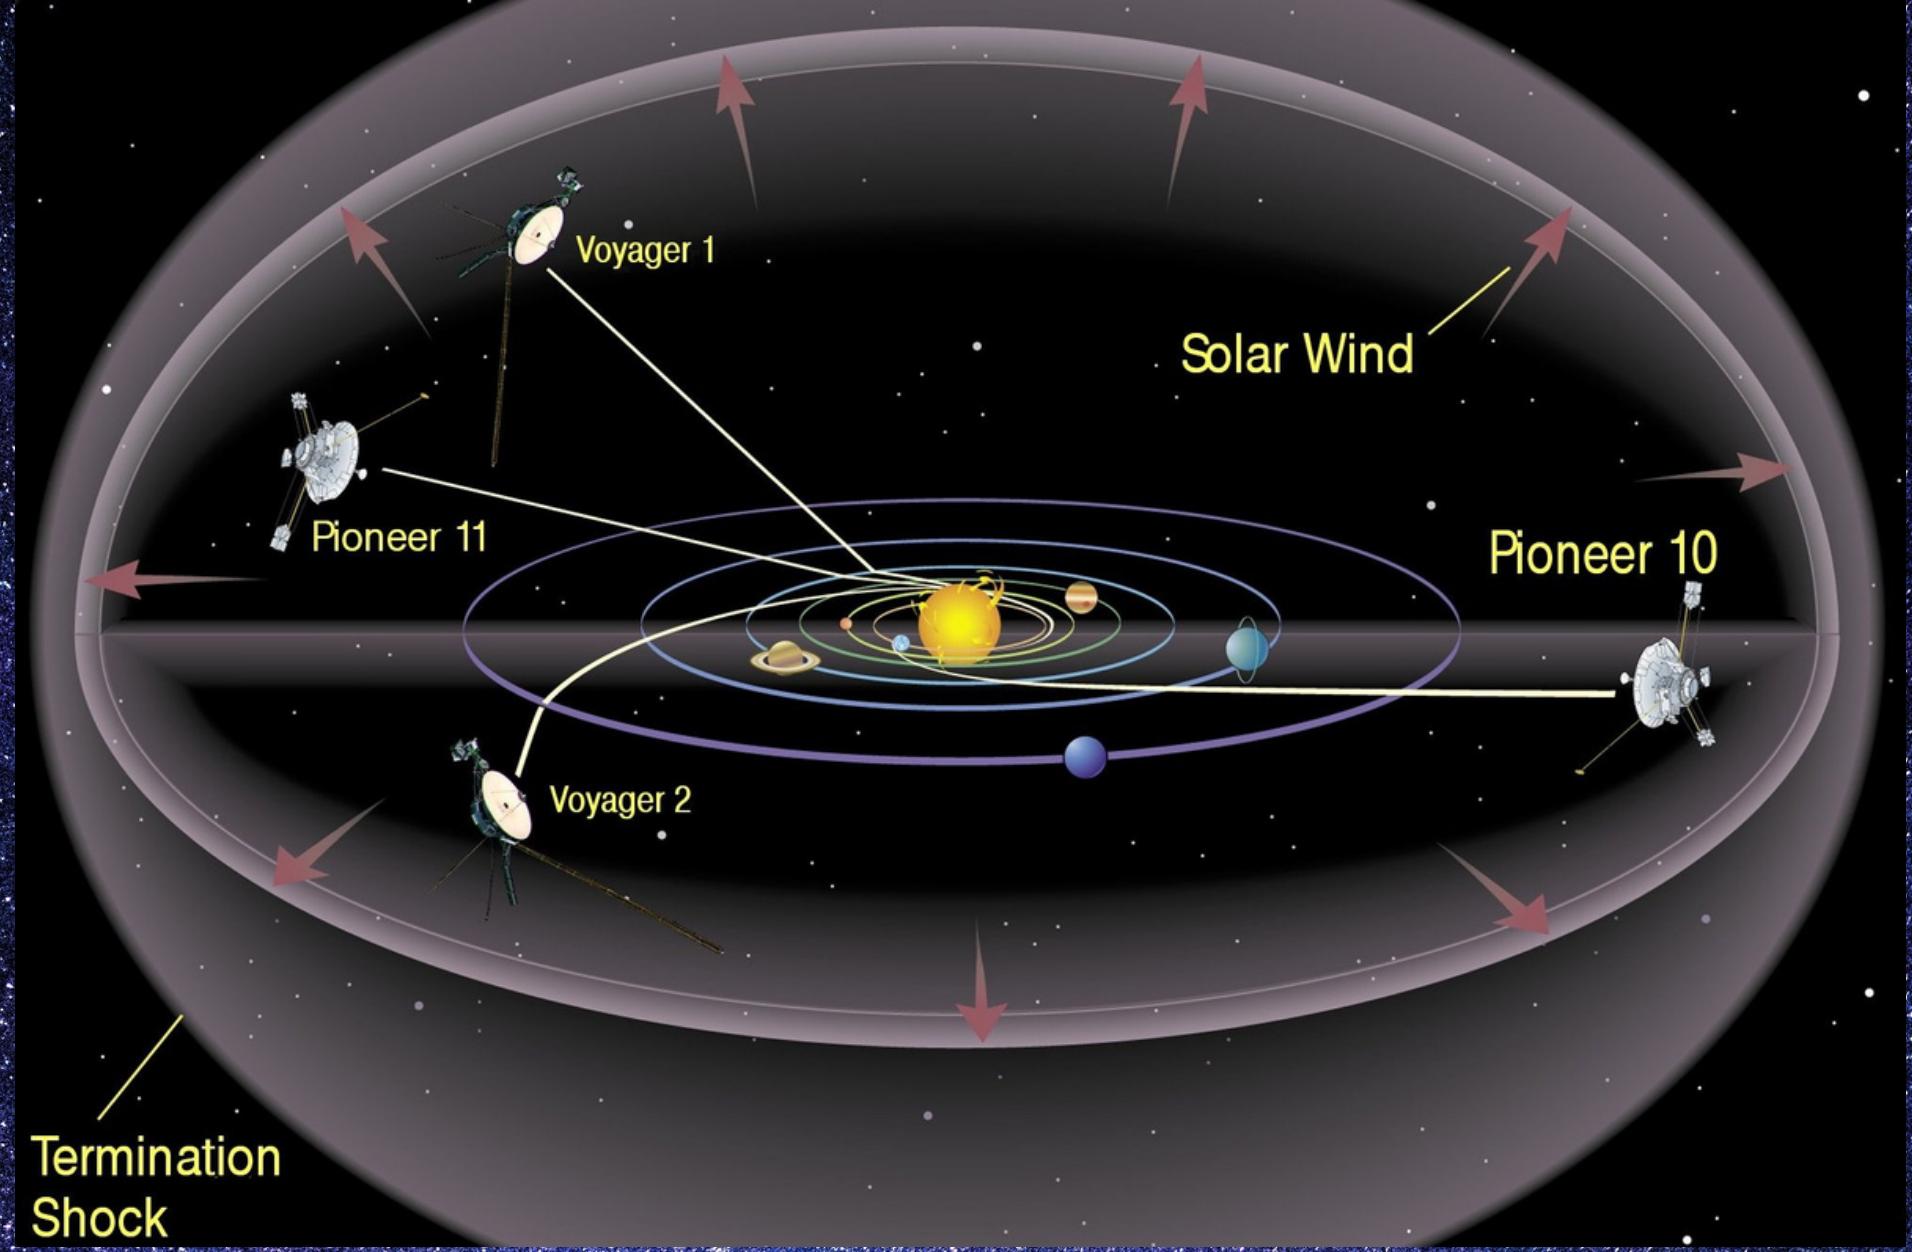

Visualization plays a vital role in implanting ideas in our brain. “Interstellar” succeeded in explaining standard level space science and helped many to develop an idea and passion to work for... Lets take this movie as reference and discuss it.

Theme: Interstellar takes place in an apocalyptic world which is nearing the end. Crops are destroyed, earth is soon to be inhabited, in this scenario it picturised the idea of creating a new habitat for humans to live in. It showed the ideas of time deletion, the worm hole concept in a creative way. It creates a hypothetical situation and what humans did to overcome it.

Review: They did a wonderful job in showing and inculcuating the complex physical theories in the movie. They highlighted the small details and aligned science and fiction perfectly in the movie. As we already said it's better to experience rather than hearing it from us so we do recommend you to watch it.

Conclusion: At last, we can say that movies have a significant effect on young minds. Who knows how many of you who are reading this will become a future scientist and help the world if this kind of apocalypse does occur....!

So watch it.. enjoy it.. and learn a lot from it.

Thank you!
